SAFETY DATA SHEET

FILE NO.: Incoming SDS_R-134a_00

SDS DATE: January 2014

- EYES:** Immediately flush with large amounts of water for at least 15 minutes. Get medical attention if irritation persists.
- INHALATION:** Remove to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention. Do not give adrenaline, epinephrin or similar drugs following exposure to this product.
- INGESTION:** Not applicable - product is a gas at ambient temperatures.
- ADVICE TO PHYSICIAN:** Because of the possible disturbances of cardiac rhythm, catecholamine drugs, such as epinephrine, should be used with special caution and only in situations of emergency life support. Treatment of overexposure should be directed at the control of symptoms and the clinical conditions.

SECTION 5: FIRE-FIGHTING MEASURES

- EXTINGUISHING MEDIA:** Use extinguishing media appropriate to surrounding fire conditions.
- UNUSUAL FIRE AND EXPLOSION HAZARDS:** R-134a is not flammable at ambient temperatures and atmospheric conditions. However, this material will become combustible when mixed with air under pressure and exposed to strong ignition sources.
May decompose on contact with flames or extremely hot metal surfaces to produce toxic and corrosive products.
Cylinders are equipped with pressure release devices to vent contents exposed to high temperatures.
Container may explode if heated due to resulting pressure rise.
- SPECIAL FIRE-FIGHTING PRECAUTIONS/INSTRUCTIONS:** Firefighters should wear self-contained, NIOSH-approved breathing apparatus for protection against possible toxic decomposition products. Proper eye and skin protection should be provided. Use water spray to keep fire-exposed containers cool.

SECTION 6: ACCIDENTAL RELEASE MEASURES

ACCIDENTAL RELEASE MEASURES: If the release is caused by an open valve and it is safe for operator to close, do so. If possible to transfer the remaining gas in the cylinder in a safe manner to a separate tank, do so. If the release cannot be isolated or closed and it is a significant amount, allow the gas to release in place or safely move cylinder to a safe area. Evacuate area in the event of a significant release in an enclosed area. Keep upwind. Ventilate area, especially low places. Remove open flames and heating elements. Disperse gas with floor level forced air. Liquid will evaporate.

Spills and releases may have to be reported to Federal and/or local authorities. See Section 15 regarding reporting requirements.

SECTION 7: HANDLING AND STORAGE

- HANDLING AND STORAGE:** Avoid breathing gas. Avoid contact with eyes, skin and clothing. Keep container closed. Use only with adequate ventilation. Use properly rated DOT or ASME cylinders/tanks only. Follow standard safety precautions for handling and use of compressed gas cylinders. Store in a cool, well-ventilated area of low fire risk and out of direct sunlight. Protect cylinder and its fittings from physical damage. Storage in subsurface locations should be avoided. Close valve tightly after use and when empty.
- OTHER PRECAUTIONS:** R-134a should not be stored in areas exceeding 125°F (52°C). Avoid areas where salt or other corrosive materials are present. Avoid excessive inventory and storage time.
R-134a should not be mixed with air above atmospheric pressure for leak testing or any other purpose. See Section 5: Unusual Fire and Explosion Hazards.

SECTION 11: TOXICOLOGICAL INFORMATION

ROUTES OF EXPOSURE: Inhalation, Skin contact, Eye contact

SAFETY DATA SHEET

FILE NO.: Incoming_SDS_R-134a_00
SDS DATE: January 2014

ACUTE EFFECTS OF EXPOSURE: Frostbite from skin contact with liquid.
High vapor concentrations are irritating to the eyes and respiratory tract and may result in central nervous system effects such as headache, dizziness, drowsiness and, in severe exposure, loss of consciousness and death.
The dense vapor of this material may reduce the available oxygen for breathing, and prolonged exposure to an oxygen-deficient atmosphere may be fatal.
Inhalation may cause an increase in the sensitivity of the heart to adrenaline, which could result in irregular or rapid heartbeats.
Medical conditions aggravated by exposure include heart disease or compromised heart function.

CHRONIC EFFECTS OF EXPOSURE: None known.

ACUTE TOXICITY: LC₅₀ (rat – 4 hr.) > 500,000 ppm
Cardiac Sensitization Threshold (dog) = 80,000 ppm
NOEL = 50,000 ppm

CHRONIC TOXICITY: Not mutagenic in four tests
Teratogenic NOEL (rat and rabbit) = 40,000 ppm
Subchronic inhalation NOEL (rat) = 50,000 ppm
Chronic NOEL = 10,000 ppm

DESCRIPTION OF SYMPTOMS: Inhalation of high concentration may lead to unconsciousness and possible death. Effects of overexposure by inhalation may include non specific discomfort, such as nausea, headache, or weakness, or temporary central nervous system depression with effects such as dizziness, headache, confusion, incoordination, and loss of consciousness. Higher exposures by inhalation may cause temporary alteration of the heart's electrical activity with irregular pulse, palpitations, or inadequate circulation. Individuals with pre-existing diseases of the central nervous or cardiovascular system may have increased susceptibility to the toxicity of excessive exposure.

CARCINOGENICITY: Not listed as a carcinogen by NTP, IARC, or OSHA

SECTION 12: ECOLOGICAL INFORMATION

AQUATIC TOXICITY: LC₅₀ (rainbow trout – 96 hr.) = 450 mg/L

EC₅₀ (Daphnia magna – 48 hr.) = 980 mg/L

DEGRADABILITY: Atmospheric lifetime = 14 years

BIOACCUMULATION: Bioaccumulation is considered unlikely for this material, due to its gaseous state at ambient temperatures and atmospheric pressure.

ADSORPTION/LEACHING: Adsorption/Leaching is considered unlikely for this material, due to its gaseous state at ambient temperatures and atmospheric pressure.

OTHER ADVERSE EFFECTS: **Ozone Depletion Potential (CFC 11 = 1.0):** 0
